

IPE

International Position Evaluation System version 3.1

System Manual

Introduction

The Mercer International Position Evaluation (IPE) System is a dynamic approach to position evaluation developed and enhanced by users in cooperation with Mercer Human Resource Consulting. It is built on many personnel executives' long experience in position evaluation and the base approach has been to develop an easy to use system which includes the necessary factors to compare all kinds of positions within most industries. Mercer Human Resource Consulting seeks to continuously improve the system and make it relevant to the changing needs of organizations. This Manual marks the third iteration of the IPE System.

The IPE system is a point system built on four factors. These factors cover the most critical determinants of job size. An optional risk factor is available if risk of mental or physical injury is a real possibility. Each factor is set within a context which modifies and fine-tunes the evaluation of the factor. The factors and modifiers each have a set of degrees and a corresponding points weighting set. The process of evaluation simply entails selecting the appropriate degree level for each factor and modifier, determining the corresponding points value for the degree and then adding up the total points score.

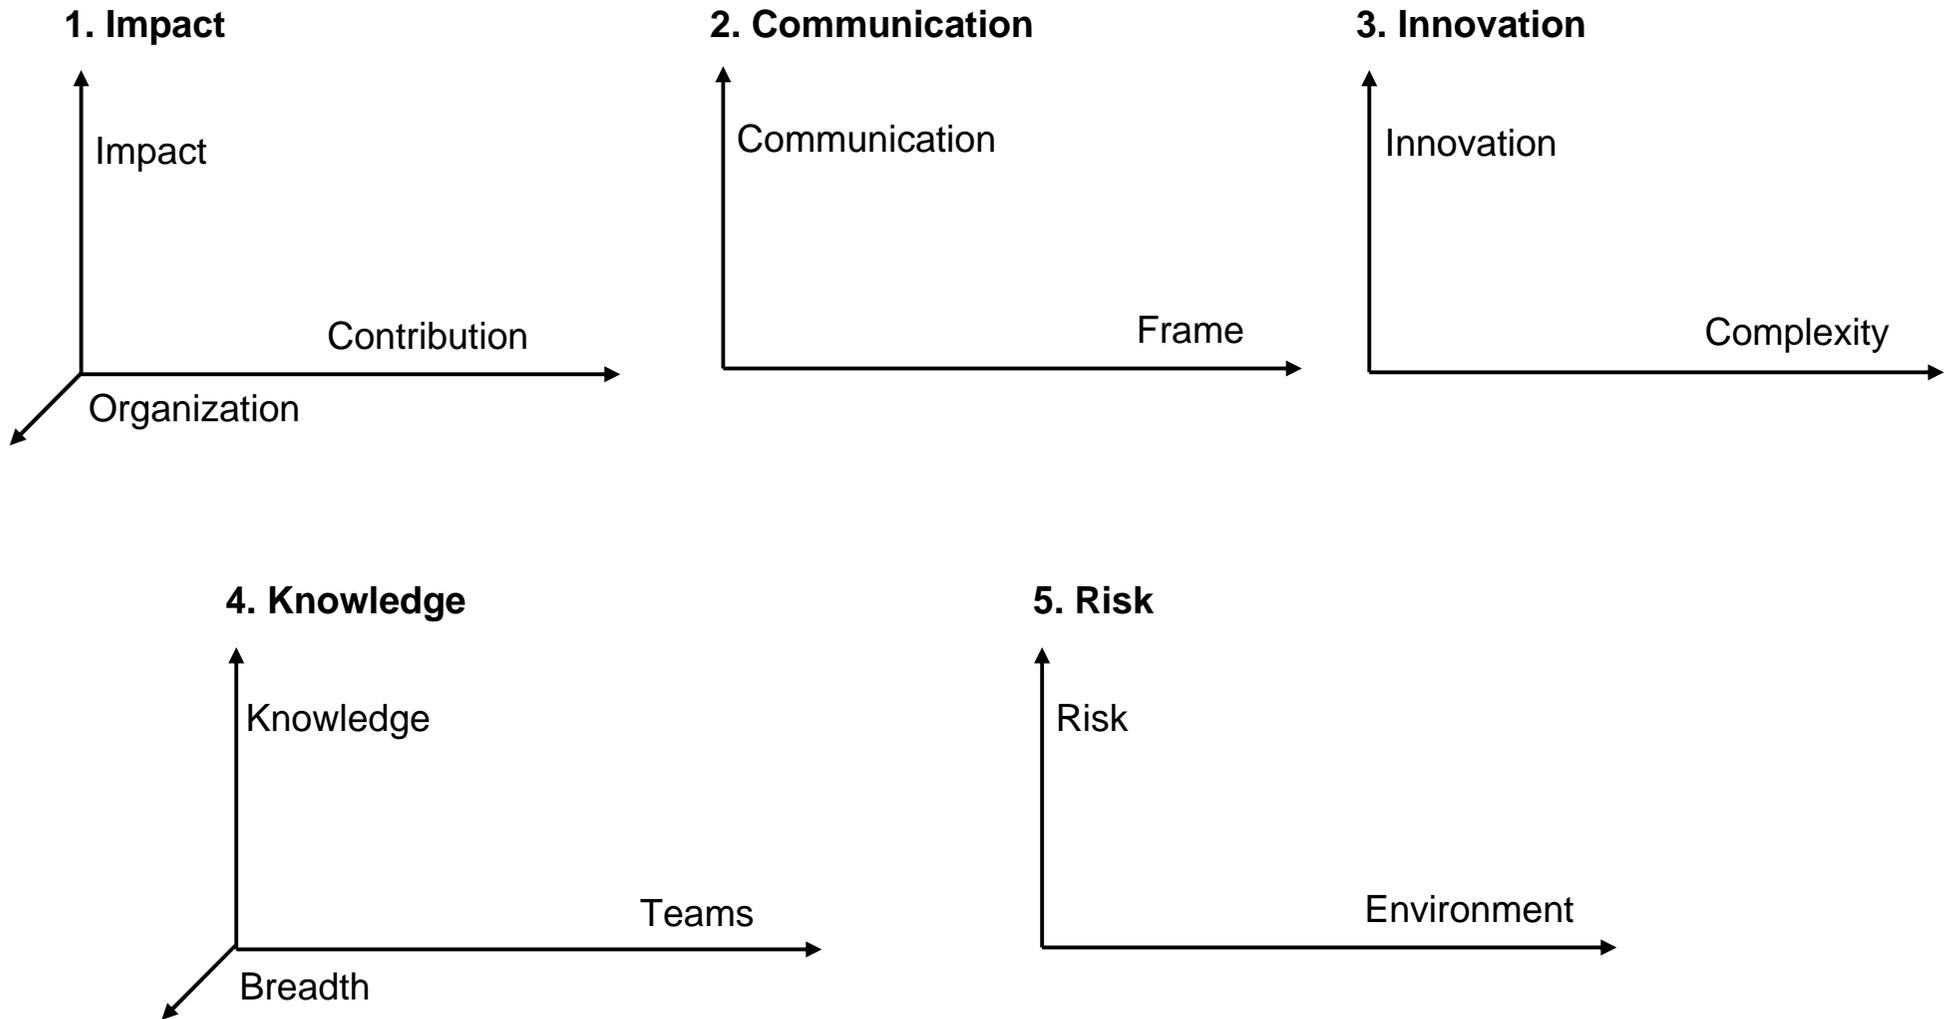

At the end of this manual, you find a position evaluation summary sheet. This should be used when evaluating the different positions factor by factor. The users can choose to use the comparison of total points but we recommend to convert the total point into "position classes" in accordance with the conversion table at the end of this manual. This conversion is convenient as it allows the system to be used in a more practical way as very small point distinctions can not justify differences in job size. The position classes are also used as the basis for comparisons in the Mercer Human Resource Consulting compensation surveys.

More information on how to use the system, case examples, a position evaluation handbook, etc... can be obtained from your contact person within Mercer Human Resource Consulting.

The IPE Factors

1. Impact (1)

Size of Organisation

To be considered as an “organisation” for the purpose of position evaluation, a business entity needs to meet three criteria. It must:

- Include at least one “primary” function, such as production, service, research, or marketing and sales
- Include at least two “supporting” functions, such as information systems, finance and / or human resources, and
- Be operational enough to produce added value.

To determine the degree level for size of organisation: Please refer to the Size of Organisation Tables (provided separately). Each country table is updated annually, in local currency, taking local inflation and exchange rate fluctuations (related to US dollar) into consideration.

Use the latest tables for comparison of evaluation results within the organisation and for alignment with other companies. If your company is an IPE licensee, these tables can be downloaded from the eIPE website or are available from your local Mercer Human Resource Consulting contact .

Determining Organisation Size

To determine the degree level for size of organisation:

1. Identify the Organisation Type category that best describes the organisation based on the kind of value it creates - Manufactured products (page 4), Services (page 5) or Financial asset services (see Note below).
2. Determine the size multiplier by selecting the value-added activity present in the organisation and add up the individual weights. A value chain step can be included in the sum of weights when the organisation has dedicated staff to take care of this activity and the value-added can be measured in the final value to customers. Value chain steps that are outsourced do not add to the multiplier weight.
3. Multiply the organisation's net sales revenue, cost/budget or assets by the multiplier value.
4. Using the Size of Organisation Table, match the organisation's adjusted sales revenue, cost/budget or assets to the proper range in the Economic Size Table and select the associated degree level.
5. The Number of Employees Table should be used to validate the Economic Size degree. Match the total number of full time employees and select the associated degree. If the degree derived from the number of employees is different from the degree of the economic size, simply take the average as the organisation size. Always give more weight to the degree level in the Economic Size Table if rounding is required.

Note:

For financial asset-based organisations, use a multiplier of 1.

For insurance companies, use premium income and the services value chain to determine the size multiplier.

For organisations with no direct measure of revenue available, use a calculated revenue number. Calculate revenue by adjusting the organisations cost/budget by a factor that reflects the industry's typical operating profit margin.

If the organisation has been in operation for less than three years, use the budgeted revenue in the third year to establish the size of the organisation.

1. Impact (2)

Products Organisation - Value Chain Description

- * The following value chain activities have been identified in organisations that develop, produce, sell and service manufactured products.
- * For each organisation to be sized, please indicate which of the following activities are part of the scope of responsibility that adds value for the organisation.

Value Chain Step		Description	Weight	Major Steps
1	Product Development	Basic Research & Development Primary research. Typically includes basic research and development activities where the eventual product and/or market potential is unknown. Generally characterised by a relatively modest rate of success (e.g., 20% of research eventually results in new products).	4.0	
2		Applied Research & Development Product development. Includes targeted R&D activities to develop a specific new product or enhancement of an existing product where the eventual market potential is more defined. Typically includes development of preliminary product specifications and pre-production prototypes. Go-to-market decisions are generally made at this stage of development.	2.0	
3		Engineering Production design. Final engineering of production-ready specifications and manufacturing processes.	1.5	
4	Production	Procurement / Inbound Logistic Supply. Specific function responsible for obtaining manufacturing inputs, including raw materials and intermediate manufactured products. Generally responsible for all contract negotiation, vendor management and spot market transactions. Supply management. Management of inbound materials, including delivery scheduling, transportation, warehousing and inventory management.	2.0	
5		Production Basic manufacturing. Production of intermediate or final goods from raw materials. May include intermediate manufactured products as part of the production process. Characterised by the conversion of materials to a new product with different characteristics (e.g., molding of plastic into auto parts).	2.0	
6		Application/Assembly Assembly of previously manufactured goods for market. Includes final assembly and packaging of two or more manufactured products (e.g., assembly of auto parts into a complete automobile). May include limited intermediate finishing of inputs.	2.5	
7	Sales and Service	Marketing Independent of sales. Function responsible for internal market analysis and planning and external communications, such as public relations, advertising and marketing collateral.	1.0	
8		Sales Excluding marketing. Includes management of direct and indirect sales forces. Does not include oversight of third-party distributors.	1.5	
9		Distribution Outbound logistics. Includes warehousing and outbound transportation of goods to third-party distributors and/or final customers.	1.5	
10		Service After-sale service. Includes customer call centers and repair, service and support. Service may be offered on warranty, contract or fee-for-service basis.	2.0	

- * Calculate an organisation's size by multiplying its revenue by the sum of weights for the value chain steps included within the organisation. Use the result to determine the organisation's Size Degree Level in the current year's *Size of Organisations Table* for the appropriate currency. All positions in the same organisation are evaluated using the same size degree level.

Multiplier

1. Impact (3)

Services Organisation - Value Chain Description

* The following value chain activities have been identified in service organisations that provide product development, application of solutions, sales and customer service.

* For each organisation to be sized, please indicate which of the following activities are part of the scope of responsibility that adds value for the organisation.

Value Chain Step		Description	Weight	Major Steps
1	Product Development	Idea & Concept Origination Intellectual capital and/or technology development. Typically includes basic research and development activities where the eventual service and/or market potential for that service is unknown.	3.0	
2		Generate Application Service definition. Includes the development of the service that will be offered and the specifics around that service, such as tools and processes for service delivery. May also include the development of new markets for existing service lines.	2.0	
3	Operations	Apply Solutions Delivery of solutions-based services. Generally includes idea-based services such as consulting and creative development where the customer is paying for ideas.	2.5	
4	Sales and Service	Marketing Independent of sales. Function responsible for internal market analysis and planning and external communications, such as public relations, advertising and marketing collateral.	1.5	
5		Sales Excluding marketing. Includes management of direct and indirect sales forces.	3.0	
6		Distribution Physical delivery of service. Distribution of services to customers through personal contact. Includes remote contact via telephone, internet, etc. May include physical delivery of idea-based or non-idea based services. "Apply Solutions" and "Distribution" always occur concurrently (but "Distribution" may occur without "Apply Solutions").	1.5	
7		Customer Service Support. Includes customer call centers and post-service support.	1.5	

* Calculate an organisation's size by multiplying its revenue by the sum of weights for the value chain steps included within the organisation.

Use the result to determine the organisation's Size Degree Level in the current year's Size of Organisations Table for the appropriate currency.

All positions in the same organisation are evaluated using the same size degree level.

Multiplier

1. Impact (4)

This factor considers the nature of a position's impact which is modified by the level of its contribution. First, determine the nature of the position's impact. Then, determine whether the level of contribution is limited, some, direct, significant or major.

		Contribution				
		1	2	3	4	5
Impact		Limited	Some	Direct	Significant	Major
Nature and scope of influence a position has on its area of responsibility / operation		Hard to identify/discern contribution to achievement of results	Easily discernible or measurable contribution that usually leads indirectly to achievement of results	Directly and clearly influences the course of action that determines the achievement of results	Quite marked contribution with authority of a frontline or primary nature	Predominant authority in determining the achievement of key results
1	Delivery Delivery according to specific standards and guidelines	Deliver own output by following defined procedures / processes under close supervision and guidance	Deliver own output following broad framework or standards with some impact on job area.	Deliver own output according to specific operational targets.	Deliver own output within broad operational targets. Significant impact within job area.	Deliver own output with major impact on broader operational targets in the job area
2	Operational Work achieves operational targets or service standards	Work to achieve objectives and deliver results with a short-term, operational focus and limited impact on others	Set and achieve day-to-day objectives that have some impact on others within the job area	Set objectives and deliver results that have direct impact on the achievement of results within the job area	Set objectives and deliver results that have a significant impact within the context of a wider operational area.	Set objectives and deliver results that have a major impact within the context of a wider operational area.
3	Tactical Specify new products, processes, standards based on organization strategy or set short- to mid-term operational plans	Provide input into new products, processes, standards or operational plans in support of the organization's business strategies, with limited impact on business unit/function overall results -- less than 10%	Provide measurable input into new products, processes, standards or operational plans in support of the organization's business strategies, with some impact on business unit/function overall results -- 10 up to 15%	Develop new products, processes, standards or operational plans in support of the organization's business strategies, with a direct impact on business unit/function overall results -- 15 up to 20%	Marked contribution to defining the direction for new products, processes, standards or operational plans based upon business strategy, with a significant mid-term impact on business unit overall results -- 20 up to 30%	Predominant authority for development of new products, processes, standards or operational plans based upon business strategy, with a major mid-term impact on business unit/function overall results -- more than 30%
4	Strategic Establish and implement business strategies with a longer-term focus (typically three to five years) based on the organization's vision	Provide input to a corporate business unit or organization's business strategies and results where input is limited by scope of the role -- less than 10%	Provide measurable input to a corporate business unit or organization's business strategies within limits of the role or input of others -- 10 up to 15%	Directly influences development of a corporate business unit or organization's business strategies within the context of the overall corporate strategy -- 15 up to 20%	Marked contribution to defining the business strategies of a corporate business unit or organization, but not predominant authority -- 20 up to 30%	Predominant authority for defining the business strategies of a corporate business unit or organization, influenced primarily by the vision for the organization -- more than 30%
5	Visionary Lead an organization to develop, implement and achieve its mission, vision and values	Lead an organization within a corporation or a corporate business unit with responsibility for influencing the organization's vision; influence is limited by strong direction from other units or headquarters	Lead an organization within a corporation or a corporate business unit with responsibility for providing strong direction regarding the organization's vision; approval of vision will ultimately exist at the corporate level	Lead an organization within a corporation or a corporate business unit with responsibility and authority for deciding on the organization's vision; vision may be influenced, in part, by corporate vision and strategy	Lead an independent organization or multiple organizations or corporate business units within a corporation; freedom to define vision and direction influenced only by direction from the board	Lead a corporation with multiple organizations or business units; create, communicate and implement mission, vision, and values for entire corporation; freedom to define vision and direction influenced only by input from the board

2. Communication

This factor looks at the communication skills frequently required by the position. First, determine the most challenging type of communications that the position holder directly is frequently involved in. Then modify the evaluation by selecting the most difficult context for this type of communication. If the communication level occurs less frequently or is only occasional, reduce the evaluation level by a half degree. If the level of communication occurs continuously, add a half degree.

		Frame			
		1	2	3	4
Communication Position's responsibility for communications both within and outside the organization		Internal Shared Interests Common desire to reach solution within a corporation	External Shared Interests Common desire to reach solution outside a corporation	Internal Divergent Interests Conflicting objectives that inhibit reaching a solution within a corporation	External Divergent Interest Conflicting objectives that inhibit reaching a solution outside a corporation
1	Convey Communicate information by statement, suggestion, gesture, or appearance	Obtain and provide information to others within the organization	Obtain and provide information to external parties	Obtain and provide information to others within the organization where tact is required to avoid conflict	Obtain and provide information to external parties where tact is required to avoid conflict
2	Adapt and Exchange Reach agreement through flexibility and compromise	Explain facts, practices, policies, etc. to others within the organization	Explain facts, practices, policies, etc. to external parties	Explain facts, practices, policies, etc. to others within the organization where past practices or divergent views constrain agreement	Explain facts, practices, policies, etc. to external parties where there may be skepticism or reluctance to agree
3	Influence Effect change without direct exercise of command where persuasion is required	Convince others within the organization where strong interest exists to accept new concepts, practices, and approaches.	Convince external parties that have a desire to reach agreement to accept new concepts, practices, and approaches.	Convince others within the organization that are skeptical or unwilling to accept new concepts, practices, and approaches.	Convince external parties who are skeptical or unwilling to accept new concepts, practices, and approaches.
4	Negotiate Come to agreement by managing communications through discussions and compromise. Issues are short-term operational, medium-term tactical or limited strategic nature	Convince others within the organization to accept complete proposals and programs where all parties are willing participants	Convince external parties that have a desire to reach agreement to accept complete proposal and programs	Convince others in the organization to accept complete proposals and programs where there may be little interest in cooperating or participating	Convince external parties to accept complete proposal and programs where there is little interest in cooperating or participating
5	Negotiate Long Term Manage communications of great importance having long-term, strategic implications for the whole organization	Reach agreement of strategic importance with others within the organization who have different points of view but a shared objective	Reach agreement of strategic importance with others outside the organization that have differing points of view but shared interests.	Reach agreement of strategic importance with others within the organization who have differing perspectives and objectives	Reach agreement of strategic importance with others outside the organization who have widely differing perspectives and objectives

3. Innovation

This factor looks at the level of innovation that the position requires. First identify the level of innovation expected from the position. Then, determine the level of complexity of the innovation.

		Complexity			
		1	2	3	4
Innovation Identify, develop and make improvements to new ideas, techniques, procedures, services, or products		Defined Problems and issues to be addressed generally fall within a single job area or discipline; scope of problem is well-defined	Difficult Problems and issues may be only vaguely defined and require understanding and consideration of other disciplines and job areas	Complex Problems and issues require broad-based solutions requiring consideration of two of three dimensions - Operational, Financial and Human	Multi-dimensional Problems and issues are truly multi-dimensional. requiring end-to-end solutions with direct impact on all three dimensions - Operational, Financial and Human
1	Follow Compare with a source, original, or authority; no changes are expected	Follow a set procedure in performance of repeated tasks or job activities	Follow a well established and familiar set of job activities or a job process to derive a solution	Follow a set of job activities or process, and face issues and problems that are difficult to deal with, manage, or overcome	Follow processes and face issues and problems that are difficult to deal with, manage, or overcome
2	Check Make minor changes	Check problems in existing systems or process	Check and correct problems that are not immediately evident in existing systems or process	Identify, define and develop solutions to issues and problems that are not immediately evident in existing systems or process	Identify, define, address and solve multi-dimensional issues and problems that are not immediately evident in existing systems or processes
3	Modify Adapt or enhance quality or value in existing methods; make better as part of day-to-day activities	Update or modify working methods in own role based upon defined procedures	Identify problems and update or modify working methods in own role without the benefit of defined procedures	Analyze complex issues and modify working methods in own work area	Extensively analyze complex multi-dimensional issues and modify working methods in own work area.
4	Improve Change significantly by enhancing entire existing processes, systems or products	Significantly improve, change or adapt existing methods and techniques drawing from personal experiences and feedback	Identify problems and significantly improve, change or adapt existing methods and techniques drawing from personal experiences and feedback	Analyze complex issues and significantly improve, change or adapt existing methods and techniques.	Extensively analyze complex multi-dimensional issues and significantly improve, change or adapt existing methods and techniques.
5	Create / Conceptualize Develop truly new concepts or methods that break new ground	Create/conceptualize truly new methods, techniques and/or processes in a single job area / function	Create/conceptualize truly new methods, techniques and/or processes across job areas or functions	Analyze complex issues before creating/conceptualizing truly new methods, techniques and/or processes across job areas or functions	Extensively analyze complex multi-dimensional issues and create/conceptualize truly new methods, techniques and/or processes across job areas or functions
6	Scientific / Technical Breakthrough Form and bring into existence major new or revolutionary advances in knowledge or technique	Bring together multiple concepts to define a new direction or a significant advance to products or services in a specific product/ service area	Bring together multiple concepts across job areas to define a new direction or a significant advance to products or services	Analyze complex issues and bring together multiple concepts across functions to define a new direction or a significant advance to products or services	Not Applicable

4. Knowledge

This factor relates to the nature of knowledge required in job to accomplish objectives and create value. Knowledge may be acquired through formal education and/or work experience. First specify the depth of knowledge applied and then identify whether the position holder applies the knowledge as a team member, team leader or manager of teams. Finally, ascertain the geographic and intercultural context in which that knowledge is applied.

		Teams				
		1	2	3		
Knowledge Minimum level of knowledge required to fulfill one's responsibilities		Team Member Individual contributor, no direct responsibility for leading others	Team Leader Coaches team members (at least three) in skills; leads, schedules, allocates and monitors work	Teams Manager Directs more than one team; determines team structure and roles of members		
1	Limited Job Knowledge Fundamental knowledge of basic work routines and standards sufficient to operate within narrow boundaries	Follow basic work routines and standards	Lead team to ensure output through implementation of basic work routines and standards	Manage and lead teams through implementation of basic work routines and standards	Breadth Application of knowledge	
2	Basic Job Knowledge Specialized knowledge of specific commercial, technical, trades, or office operations areas	Apply basic knowledge of practices and procedures for one's own position	Lead a team through application of basic knowledge of practices and procedures	Manage and lead teams through application of basic knowledge of practices and procedures		
3	Broad Job Knowledge Broader knowledge of theory and principles within a professional discipline or advanced knowledge of specific technical/operational practices	Apply broad knowledge of one professional discipline or advanced knowledge of specific technical/operational practices	Lead a team through application of broad knowledge of one job area or basic knowledge of several related job areas	Manage and lead teams through application of broad knowledge of one job area or basic knowledge of several job areas	Regional Continental region (e.g. Europe, Asia, North America, Latin America, Middle East)	2
4	Expertise Advanced/well-developed skills and knowledge within a specific professional discipline involving the integration of theory and principles with organizational practices and precedents	Apply deep knowledge of one job area or broad knowledge of several job areas	Lead a team through application of deep knowledge of one job area or broad knowledge of several job areas	Manage and lead teams through deep knowledge of one job area or broad knowledge of several job areas	Global All regions of the world	3
5	Professional Standard Mastery of a specific professional discipline combining deep knowledge of theory and organizational practice or expertise across several different disciplines within a function or several different job areas across functions	Apply mastery of a specific professional discipline or broader expertise in most or all areas within a function	Lead a team through expertise in most or all areas within a function or mastery of a specific professional discipline	Manage and lead teams through expertise in most or all areas within a function		

4. Knowledge

This factor relates to the nature of knowledge required in job to accomplish objectives and create value. Knowledge may be acquired through formal education and/or work experience. First specify the depth of knowledge applied and then identify whether the position holder applies the knowledge as a team member, team leader or manager of teams. Finally, ascertain the geographic and intercultural context in which that knowledge is applied.

		Teams		
		1	2	3
Knowledge Minimum level of knowledge required to fulfill one's responsibilities		Team Member Individual contributor, no direct responsibility for leading others	Team Leader Coaches team members (at least three) in skills; leads, schedules, allocates and monitors work	Teams Manager Directs more than one team; determines team structure and roles of members
6	Organizational Generalist / Functional Specialist Broad management experience across several functional areas or businesses, or concentrated knowledge of a particular discipline; considered the organization's expert within a particular discipline	Apply concentrated knowledge of a particular discipline or professional standard knowledge across all job areas within a function	Lead a team through professional standard knowledge of all job areas within a function. practical experience in several functional areas or businesses, or concentrated knowledge of a particular discipline	Manage and lead teams through professional standard knowledge of all job areas within a function or practical experience in several functional areas or businesses
7	Broad Practical Experience / Functional Preeminence Broad and substantive management experiences across several line and support functions or businesses, or recognized outside the organization as having paramount capability in a broader discipline/area of study	Apply preeminent expertise across functions or within a broader discipline, or broad practical experience in many major functions within or across businesses	Lead a team through broad practical experience of many major functions within or across businesses, or preeminent expertise across functions or within a broader discipline	Manage and lead teams through broad practical experience in many major functions within or across businesses
8	Broad and Deep Practical Experience Very significant management experience in several businesses and most line and support functions combined with deep experience in one or more of the organization's most important line functions	Not Applicable	Not Applicable	Manage and lead teams through broad and deep practical experience of most functions across multiple businesses

5. Risk

This factor consider the nature of risk within the context of exposure. First, determine the level of risk that the position is subject to and then determine the exposure to risk from the environment. **When positions exist under normal working conditions with low exposure to risk this factor is not required.**

		Environment		
		1	2	3
Risk The maximum level of mental and physical risk that the positionholder is subject to under normal working conditions.		Low Exposure Inconvenience can occur and temporarily impacts health	Moderate Exposure Exposure to risk is frequent and health may be affected.	High Exposure Constantly exposed to an environment that may be permanently harmful to one's health
0	Normal Inconvenience might occur temporarily but normally does not lead to injuries or other health constraints	Normal working conditions. Physical and/or mental work in an environment where international standards of safety apply.		
1	Mental Risk of high levels of ongoing stress and mental pressure that can affect one's health	Recurrent work under strict and tight time pressure. Threatening and hostile verbal confrontations.	Frequent occasions of long lasting work under strict and tight time pressure. Threats of political unrest.	High exposure to violence. Recurring and/or long lasting assignments in politically volatile areas.
2	Injury Risk of physical injury	Performing tasks that require a high level of vigilance as an integral part of the job in order to ensure safety and avoid injury	Work in environments where effective counter-measures to avoid injuries are not fully possible. Possibility of violence in work area that could lead to personal injury.	Continuous work in environments where physical injury may occur as safety and security are outside the control of the organization. Frequent occurrence of violence in surrounding work area.
3	Disability Risk of physical disability or death	Work in an environment where physical disability and life-threatening accidents can occur if there is a failure to adhere to safety and security guidelines	Work in environments where there is a real possibility of physical disability and/or life-threatening risks despite adherence to safety and security guidelines.	High exposure to the possibility of permanent disability in result of events outside one's own control. Recurring and/or long lasting assignments in areas experiencing war, terrorism or lack of law enforcement.
